## Chapter 1 Introduction

### 1-1 DP-2401 features

- Control 24 channels.
- Able to set buffer time between actions of different channels (0 Sec - 4 Minutes).
- Action delay protection function. (0 Sec. - 30 minutes)
- Manual on/off control, DMX control and scenes control.
- Status indicator LED for each channel. ( Different color under different status)
- Being attached with the signal input, the machine can control the channels through the standard DMX signal.
- Every channel has 3 points in terminal port, including NC (Normal close), C(Common) and NO(Normal open) dry contacts. The current through each contact can't exceed 10A.
- Accept EDX signal and connectable to ECP control panel.

### 1-2 DP-2401 Specifications

- AC Input : 100~240V
- DMX Signal/Output : DMX512 , EDX SYSTEM
- DMX Output Channel : 512 CHANNEL
- DMX signal Connector : 4-PIN CONNECTOR
- Dimension : 442x 162x 44
- Weight : 2.5KG

1-3 Front Panel Introduction

**Front Panel:**

1	LED Display
2	Load CH Manual Switch
3	Function Key: FNC : Function / Enter Up, Down : Sub-Function Key Left, Right : Sub-Function Key 1, 2, 3, 4, 5, 6, 7, 8, off :Presetting Scenes Hot Key
4	LCD Display
5	Power Switch

**Real Panel:**

1	Load output terminal
2	DMX "IN" terminal
3	AC Input

## Chapter 2 DP-2401 Function Setting

### 2-1 Initialization

**STEP1** Press **【FNC】** , LCD display :

▶ **F1: HOME**  
**F2: DMX ADDRESS**

**STEP2** Press **【DOWN】** till display :

▶ **F9: OFF DELAY**  
**F10: SHIP INIT**

**STEP3** Press **【FNC】** till display :

**Ship Initial**  
**YES ( ), NO (✓)**

**STEP4** Press **【LEFT】** mark on YES, and then press **【FNC】** confirm, LCD display:

**Ship Initial**  
**Please wait**

And then display :

**SC: OFF WT: 0S**  
**PRT: 0S END:**

## 2-2 DMX Addressing Setting

**STEP1** Press **【FNC】** , LCD display :

▶ **F1: HOME**  
**F2: DMX ADDRESS**

**STEP-2** Press **【DOWN】** till **F2** , and then press **【FNC】** , LCD display :

**DMX START CH**  
**CH = 001**

**STEP-3** Press **【UP】** , **【DOWN】** to change DMX address :

**DMX START CH**  
**CH = 015**

**STEP-4** Press **【FNC】** save setting , go back to “Home” display:

## 2-3 ID No. Setting

**STEP1** Press **【FNC】** , LCD display :

▶ **F1: HOME**  
**F2: DMX ADDRESS**

**STEP2** Press **【DOWN】** , LCD display :

**F2: DMX ADDRESS**  
▶ **F3: ID SET**

**STEP-3** Press **【FNC】** enter ID setting , LCD display:

**ID NUM = 001**

**STEP-4** Press **【UP】** , **【DOWN】** change DMX address :

**ID NUM=015**

**STEP-5** Press **【FNC】** save setting , go back to “Home” display

## 2-4 DMX input signal acceptance setting

**STEP1** Press **【FNC】** , LCD display :

▶ **F1: HOME**  
**F2: DMX ADDRESS**

**STEP2** Press **【DOWN】** , LCD display :

**F3: ID SET**  
▶ **F4:DMX BYPASS**

**STEP-3** Press **【FNC】** enter DMX BYPASS setting function , LCD display:

**DMX BYPASS SUT**  
**ON OFF**

**ON** means system doesn't accept DMX signal.

**OFF** means system accept DMX signal.

**STEP4** Press **【LEFT】** , **【RIGHT】** choose “ON” or “OFF” press **【FNC】** to confirm , go back to “Home” display

## 2-5 Zone setting

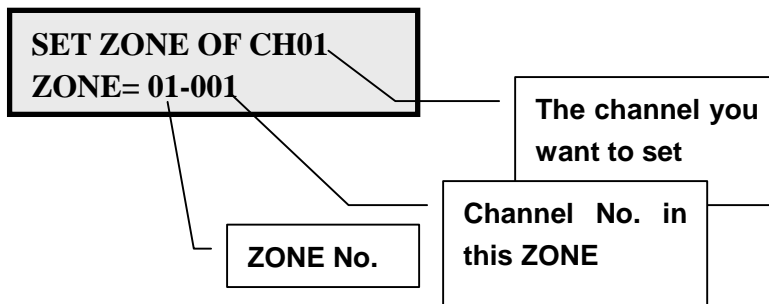

**STEP1** press **【FNC】** , LCD display :

▶ **F1: HOME**  
**F2: DMX ADDRESS**

**STEP2** Press **【DOWN】** , LCD display :

**F4:DMX BYPASS**  
▶ **F5:PER CH ZONE**

**STEP-3** Press **【FNC】** enter PER CH ZONE setting , LCD display:

**STEP-4** CH01 on LCD as the graph show. Press **【UP】** , **【DOWN】** choose channel.

**STEP-5** Press **【RIGHT】** go back to choose its zone.

**STEP-6** Press **【UP】** or **【DOWN】** change zone.

**STEP-7** Press **【RIGHT】** go back choose this channel is which channel in this zone

**STEP-8** Press **【RIGHT】** go back to choose channel.

**STEP-9** Repeat STEP2, 3, 4, 5,6,7,8 to set all channel. Press **【FNC】** save setting, go back to “Home” display

**2-6 Scenes Setting**

**STEP1** Press **【FNC】** , LCD display :

**▶ F1: HOME**  
**F2: DMX ADDRESS**

**STEP2** Press **【DOWN】** , LCD display :

**F5:PER CH ZONE**  
**▶ F6:SCENE SET**

**STEP-3** Press **【FNC】** into Scenes No. choosing , LCD display:

**Sc Setting 001**  
**KEYIN 1...100**

**STEP-4** Press **【UP】** , **【DOWN】** choose scene No. need to setting, and press **【FNC】** into scene setting, LCD display :

**EDIT SCENE 02**  
**CH01 -----> off**

**STEP-5** Press **【LEFT】** , **【RIGHT】** to change channel, press **【UP】** , **【DOWN】** chose on or off for this channel. For example :

**EDIT SCENE 02**  
**CH01 -----> on**

It means the channel 2 in scene 2 is set as on.

**STEP-6** After setting press **【FNC】** , LCD display :

**SAVE SC OR QUIT?**  
**SAVE (✓) , QUIT( )**

**STEP-7** Press again **【FNC】** save setting, go back to “Home” display

## 2-7 Action delay protection setting

When DP-2401 with the huge power output, and switch on in the same time. That will cause the power system drop the voltage. DP-2401 can set up the delay time

**STEP1** Press **【FNC】** , LCD display:

▶ F1: HOME  
F2: DMX ADDRESS

**STEP-2** Press **【DOWN】** till display :

▶ F6: SCENE SET  
F7: OPEN DELAY

**STEP-3** Press **【FNC】** into action delay time setting, LCD display :

OPEN TACTIC SET  
Time = 0S

**STEP-4** Press **【UP】** , **【DOWN】** could change the time, LCD display :

OPEN TACTIC SET  
Time = 4S

( setting time 0s----4min )

**STEP-5** Press **【FNC】** save setting, go back to “Home” display

**STEP-6** If have the Scenes change(or using DMX input control), output will follow the setting time.

Setting EX:

Sc1: CH01=100, CH02=100, CH03=100 ..... CH24=100

OPEN TACTIC = 5sec

Press SC1 to recall scene 1, you will find CH01 switch on, LCD display

SC: 01	WT: 5S
PRT: 0S	NEXT:

( WT : 5s          delay time between channels is 5s )

When "NEXT" flash, after 5 sec, the CH02 on. And after 5 sec, then the CH03 on....., Till all the CH24 been switch on. Then "NEXT" will disapper, and showing "END", it means no one of the channel on the waiting line

## 2-8 Preheat Setting for Protecting Loads

Some particular loads using the DP-2401 ( **High-intensity discharge lamps** ) , those kind of the load between off and on has be cool down the temperatures , otherwise this kind of the loads will be damage. The DP-2401 has the additional function for protecting loads. When the loads switch off and on again will automatic wait for the setting delay time.

**STEP-1** Press **【FNC】** , LCD display :

▶ **F1: HOME**  
**F2: DMX ADDRESS**

**STEP-2** Press **【DOWN】** till display:

**F7:OPEN DELAY**  
▶ **F8:SELF PROTE.**

**STEP-3** Press **【FNC】** enter preheat setting for loads protection, LCD display :

**SELF PROTECT SET**  
**Time =0S**

**STEP-4** Press **【UP】** , **【DOWN】** to change preheat time , LCD display :

**SELF PROTECT SET**  
**Time =27S**

(preheat time: 0s----30min)

**STEP-5** Press **【FNC】** save setting , go back to “Home” display

**STEP-6** when using the scence ( or using the DMX control ) , one of the channel switch “off” and “on” again can setting the delay time.

Ex. Setting:

Sc1: CH01=100,CH02=100,CH03=100 ..... CH24=100

SELF PROTECT = 27sec

Press SC1 , Using Scenes 1, and Press “OFF” , Close all the CH. And Press SC1 again, you will find the Scene 1 did not call out , The LCD display:

<b>SC: 01</b>	<b>WT: 0S</b>
<b>PRT: 27S</b>	<b>NEXT:</b>

( PRT : 27s          preheat time is 27s )

The “NEXT” Flash (some CH. waiting for switch on) .After 27 Sec. the SC01 will be call out ( Switch on each CH. ) , The flash “NEXT” on the LCD will be gone and Showing “END” , its mean no one of the channel on the waiting line.

**Chapter 3 DP2401 Operation**

**3-1 DMX Control**

**STEP-1** When DMX signal input, DP-2401 will automatically become DMX dimming pack, LCD display,

**DMX:002      WT: 0S**  
**PRT: 27S      END:**

LCD first line shows "DMX; 001" it means DMX control and start channel is 002.

Ex, DMX input signal is,  
 DMX001=0%, DMX002=100%, DMX003=10%, DMX004=51%, DMX005=19%, DMX006 = 0%, DMX007 = 0% ..... DMX023 = 0%

DP-2401 each channel status are:  
 CH01->DMX002 =ON, CH02->DMX003=OFF, CH03->DMX004=ON,  
 CH04->DMX005=OFF, CH05----CH24=OFF  
 CH01->DMX002=ON means DP-2401's first channel is correspond with DMX 002 signal from DMX controller, and DMX002 date is 100%, so DP-2401's first channel output is "ON".

Attention:

1. DMX dimming value > 50% DP-2401 setting is ON  
 DMX dimming value < 20% DP-2401 setting is OFF  
 50% > DMX dimming value > 20% maintain previous mode.
2. When DP-2401 using DMX signal control, the Scenes function will automatically closed.

**3-2 Scene Control**

**STEP-1** No DMX signal input,DP-2401 works in scenes control function,  
 LCD display :

**SC: 01      WT: 0S**  
**PRT: 27S      NEXT:**

**STEP-2** Press **【SC1】**, **【SC2】**, **【SC3】** ... **【SC8】** , **【OFF】** recall scene.

Press OFF , LCD display :

<b>SC:OFF</b>	<b>WT: 0S</b>
<b>PRT: 27S</b>	<b>END:</b>

### 3-3 Manual Control

**STEP-1** For the easy and fast control, DP-2401 provides easy manual control.

**STEP-2** The manual control switch set on top is ON, on the bottom is OFF, on the middle is AUTO.

### 3-4 DP-2401 24 Channel LED Display

- The DP-2401 one of the CH is "OFF", manual control switch "ON" -----> RED
- The DP-2401 one of the CH is "OFF", manual control switch "OFF" -----> N/A
- The DP-2401 one of the CH is "OFF", manual control switch "AUTO" -----> N/A
- The DP-2401 one of the CH is "ON", manual control switch "ON" -----> Orange
- The DP-2401 one of the CH is "ON", manual control switch "OFF" -----> Green
- The DP-2401 one of the CH is "ON", manual control switch "AUTO" -----> Orange
